School Project

Design and construction of an Ac continuity tester

Construction Steps

1. Connect the series resistor to one end of the neon lamp or LED.
2. Connect the test probes to the ends of the circuit (one probe to the resistor and the other to the lamp/LED).
3. Place the circuit in an enclosure or housing to protect it from the environment and prevent electrical shock.
4. If desired, add a battery or power source to the circuit to light the lamp/LED

Student industrial work experience scheme

Fiyin pharmacy Computer village esa oke osun state Nigeria

1. Preparing equipment and materials for lab experiments
2. Setting up lab stations and ensuring a safe working environment
3. Reviewing lab manuals and procedures to ensure familiarity with experiments
